## Program Overview

Some of the highlights of the program include a possible workshop organized by Singapore Maritime Institutes (SMI) on Maritime Logistics and Supply Chain. The purpose of the workshop is to identify important and upcoming research problems in Maritime Logistics and supply chain which might include risk management in maritime supply chain, port choices, ICT – collaborative planning between port and liners and port competitiveness. Another distinct highlight of the program is that there will be sessions on Future Port Concepts where some participants of the next generation container port challenge (NGCP Challenge) will be invited to share their innovative ideas for the future port design (For details of the NCGP challenge, please refer to <http://bit.ly/145VaT7>)

We also welcome special sessions, and If you would like to organize one, please contact [Celine Neo](#).
